Improving transportation systems, emissions, and traffic congestions

A next-gen application enabling innovative services for various means of transport and traffic management

Custom-built platform for intelligent transportation solutions:
• Passenger Information System (PIS)
• Automatic Vehicle Location System (AVL)
• Security Camera Network System (SCN)
• Vehicle Health Monitoring And Diagnostics (VHMD)
• Infotainment System

Safer roads, secure environment, comfortable journey

• Custom high-performance platform for enabling ITS with compliance to UBS II ITS specification
• A platform having pluggable ML engines for various applications like AI DMS, telematics data analytics and insights, security, surveillance, etc.
• Smart Traffic Management - Reduced congestions, accidents
• Machine learning and pattern matching based route planning - effective road usage
