

# Your Partner in Battery Transparency

MOBIUS+ is a next-generation Battery Lifecycle and Traceability System that unifies monitoring, compliance, and lifecycle data into one intelligent platform.

From raw material sourcing to second life and recycling, MOBIUS+ empowers and connects every stakeholder in the supply chain – raw materials manufacturers, battery producers, vehicle management companies, recyclers, and regulators – with complete visibility and traceability.

The platform seamlessly integrates battery lifecycle data, enabling organizations to make data-driven decisions that support circularity and sustainable lifecycle management.

## KEY CUSTOMER BENEFITS

### End-to-End Battery Traceability & Ethical Sourcing

Unlock complete insight into each stage of the battery lifecycle—from raw material mining to reuse and end-of-life – supporting full traceability and operational responsibility.

### Seamless Collaboration Across the Supply Chain

Create a unified data ecosystem that links all key stakeholders to promote transparency, reliable data flow, and regulatory confidence.

### Smart Battery Insights for Lifecycle Optimization

Leverage up-to-date battery insights to support smarter planning, improve asset reliability, and enhance long-term operational performance across the lifecycle.

### Sustainability Reporting & ESG Readiness

Monitor key environmental indicators such as carbon footprint to support ESG objectives and align with circular economic practices.

### Second-Life & Recycling Intelligence

Assess and Identify batteries ready for second-life use or recycling, helping maximize material recovery, eco-friendly disposal, reducing waste and preserving resources to promote circular practices.

## MOBIUS+ KEY FEATURES

### Digital Battery Passport

A secure digital record of a battery's lifecycle, usage history, and environmental footprint

### Data Visibility

Public data via QR scan & sensitive data for authorized users only

### Digital Product Passports

Track materials, ownership, and changes with a verifiable digital trail

### Blockchain-Powered Integrity

Tamper-proof, immutable battery data secured through blockchain

### Flexible Passport Creation

Generate Passports via bulk import, manual input, or APIs
