

2126 Design & Development Engineers

Job Titles: Design Engineer, Design and Development Engineer, Systems Engineer, Lead Engineer, Component Engineer

Job description:

A Design Engineer is a professional in charge of finding innovative ways to create products that are functional and meet client wants and needs. They modify existing systems or develop new ideas for processes to make them more efficient.

Designing systems, processes, methodologies as well as component and vehicle designs to enhance the overall vehicle performance for the customer and environment. Transforming concepts into prototypes for testing, validating and improvement for ultimately mass volume production.

Managing and monitoring all installed systems and infrastructure. Installing, configuring, testing, and maintaining operating systems, application software and system management tools. Ensuring the highest levels of systems and infrastructure availability.

Taking ownership and management of cloud components of the infrastructure, leading on support and maintenance. The team have responsibility for the technical delivery components of a variety of projects. The role holder will act in a project management capacity where required.

Component engineering involves the selection, maintenance, design, and construction of smaller parts for larger machines. Component engineers are needed in all manufacturing industries, from the auto and space industries to defence.
