

Tele-Health portal to enhance clinical consultations

KEY CHALLENGE

Design of a Telehealth portal that helps hospitals to get consultations from clinicians sitting remotely.

SCOPE OF WORK

- UX Design of the application
- Create a Flash prototype for the developers to show the transitions between the screens and forms.
- Development of the Carenection Application.

KEY CONTRIBUTION

Tata Elxsi team designed a common platform for a patient and a doctor to communicate or take counselling without being physically present. This app has three portals including of patient, physician and admin portal. The hospital raises requests for physicians according to their requirements country wide and is given assistance promptly. The purpose was to make medical consultation for patients possible anywhere anytime they need while saving time and money

Leading National Telepsychiatry Service Provider Company

InSight is the leading national telepsychiatry provider organization with a mission to increase access to behavioral health care. The InSight team has been practicing telepsychiatry and advocating for the proper use of telemedicine in behavioral healthcare since 1999.
